Owncloud Writing Test

This is a writing test to assess your technical and writing skills.

What we are evaluating:

- How well you write.
- How well you explain concepts.
- What you choose to include versus what you defer to external sources.
- How well you use your writing tools.

Task: Create a Quickstart for Installing and Using Owncloud

Create a quickstart for installing an Owncloud server and connecting to it as a client. Your quickstart must address the following user stories:

1. As an administrator, how do I install and configure an Owncloud server?
2. As an administrator, how do I enable users to connect to the Owncloud server using the server's IP address and port 8080?
3. As an administrator, how do I add a user account?
4. As a user, how do I connect to the Owncloud server using a desktop or mobile client?

Task: Publish your Quickstart using Github Pages

Write your quickstart in Markdown and publish it using GitHub Pages and Jekyll.

Task: Submit a Link to your Quickstart

Send us your links to:
1. The Github Pages site for your quickstart. This should display the rendered HTML from the markdown file in your Github repository.
2. The GitHub repository with your markdown.
